

CAD MANIA

CAD Modelling Competition

Mecha Rush'26 · Dept. of Mechanical Engineering · BSACIST

EVENT BRIEF

A computer-aided design contest that puts participants' 3D modelling proficiency, engineering drawing interpretation, and precision under the clock; all in a single focused session.

Each participant receives a 2D engineering drawing and must construct the corresponding 3D model in Creo within 30 mins to 1 hr. Once modelling is complete, they determine and submit the mass of the component. The participant whose prediction is most accurate and submitted earliest is declared the winner.

VENUE & TENTATIVE SCHEDULE

Venue: Mechanical Block, 4th Floor — CAD Lab (Dassault Systèmes)

Schedule April 7, 2026 | Half-day Event → 1.30PM - 2.30PM

PARTICIPATION

- Solo participation only, no team entries permitted
- Late arrivals will not be admitted once the 2D drawing has been distributed
- Online pre-registration is mandatory; on-spot entries will not be accepted
- All participants must carry their college ID and conformation mail

RULES & REGULATIONS

- Participants receive a 2D engineering drawing at the start of the session
- The complete 3D model must be built within 30 minutes from drawing distribution
- Predicted mass must be written on the answer sheet and submitted to the nearest coordinator, it must not be called out aloud or discussed with others in the room
- A tolerance of ± 0.5 g from the actual reference mass is accepted
- Each participant may declare their mass prediction a maximum of 3 times
- Participants must bring their own laptops; lab systems may be available but will have Creo installed only
- The first two participants whose predictions fall within tolerance, ranked by submission order are declared Winner and Runner-up respectively
- A virtual buzzer will be provided by the coordinators, where it is must be pressed to tell the answers, the buzzer must only be pressed to tell answers, accidental clicks may lead to loss of an attempt to tell the answer
- The organising committee has the right to modify rules, participants will get informed if changes made

Mass predictions must be written and handed to a coordinator, do not announce answers aloud. Shouting out or sharing answers with others is grounds for immediate disqualification.

EVALUATION

Winner = **Most accurate mass prediction within ± 0.5 g submitted first**

Criterion	Basis
Mass Accuracy	Predicted mass compared against the actual reference with tolerance ± 0.5 g
Call-out Order	Among equally accurate predictions, priority goes to the participant who submitted first
Tie-breaker	Equal standing resolved by a fresh round with a new model under identical conditions

DISQUALIFICATION

- Arriving after the 2D drawing has been distributed
- Shouting out or discussing mass predictions with other participants
- Exceeding the 3-attempt limit for mass declaration
- Use of unauthorized software, references, or external assistance during the session
- Any form of malpractice or academic dishonesty

Judges' decisions are final. Event coordinators reserve the right to modify rules for smooth execution.
